

PROFESSIONAL SUMMARY:

Multi-faceted software developer experienced in the full project life cycle of web applications from design and implementation to integration. Dedicated and eager to execute web development skills as a junior full-stack developer.

TECHNICAL SKILLS:

HTML, CSS, JavaScript, React, JQuery, Java, Spring Boot, Python, Node.js, Django, Bootstrap, MySQL, Postgres, SQLite, MongoDB, Postman, API integration, bcrypt/jBcrypt, MVC, GitHub, Linux, Raspberry Pi, Adafruit PCA9685

PROJECTS:

Call Your Momma | Full-Stack Developer | Oakland, CA 2019
E-Commerce website built using: Python, Django, SQLite, Heroku, Postgres

- Wireframe design allowed me to efficiently structure the features that are needed to provide shoppers with a seamless experience navigating through products and company details.
- Provided shoppers with a secure payment method by integrating Stripes API used for hashing card purchases for protecting shopper's financial information.
- Integrated Google's OAuth API to provide shoppers with an alternative login that verifies each shopper's credentials by securely login them in through Google's database.

Pi Plane Flight Controller | Full-Stack Developer | Ontario, CA 2019
Flight Controller built using: Python, Raspberry Pi, AdaFruit PCA9685

- Raspberry Pi computer was converted to be used as a flight controller to gain a deeper understanding of implementing software and hardware through the Python Language by integrating pulse width modulation for motor control.
- Integrated pulse width modulation software to Raspberry Pi GPIO pins to access a full range of frequencies for brushless motor and 9g servo control.
- Implemented PyGame library to have users be able to use a wireless gaming controller to send commands to the raspberry pi as it reaches greater distances of flight.

ComUnity | Full-Stack Developer | Oakland CA 2019
Cultural Event website built using: Java, Spring Boot, MySQL, Postman

- Event-based website built to attract people of various ethnicities and backgrounds to be able to connect with a multitude of cultures.
- Implemented calendar API to allow admins of events to be able to inform attendees of event updates and efficient scheduling through Google services.
- Enabled Spring Boot JSTL tags to incorporate features such as liking, joining, and canceling events to enhance the user's experience for accurately updating guest and VIP attendees.

EXPERIENCE:

Freelance Web Developer | NGEX | Oakland CA 2019

- Built engaging portfolio website UI for MI Board of Education candidate with JavaScript, HTML, CSS, BootStrap
- Collaborated with the CEO of NGENX to ensure customer satisfaction

Customer Sales Advisor | GNC IPomona CA 2018- 2019

- Improved operational efficiency by managing customer requests, store inventory, transactions, new purchase orders, increasing sales by ~15%
